

Addendum

If you decide to turn the CA-880 off while your computer is running, a message icon will appear on screen displaying: DFI BAD. This message is simply telling you that the external drive is not in operation. When you turn the CA-880 on again, the message icon will disappear.

Caution ! When you turn off the CA-880, you **MUST** wait for the DFI BAD icon to appear before you can turn the drive back on again. If you try to turn the drive back on before the icon appears, the system will lock up.
